Listening Tours

- Met with campus leaders to identify critical questions and decision-making needs.
- Collected reporting, dashboard, and data-access priorities from across the institution.
- Used institutional feedback to guide future investments and priorities.

Governance and Trust

- Clarified roles for data owners, trustees, stewards, and custodians.
- Established governance processes to support trusted decision-making.
- Balanced responsible data access with privacy, security, and stewardship.
- Included every division in the governance groups and processes.

Foundational Data Improvements

- Prioritized key institutional data domains essential to reporting and analytics.
- Improved consistency, quality, and governance of core institutional data.
- Created a scalable foundation for future dashboards and self-service reporting.

myData Hub

- Created a single “front door” for data
- Centralized reports, dashboards, metrics, and institutional resources.
- Simplified discovery and access to trusted information.
- Connected governance, literacy, and reporting through a common platform.

Institutional Impact

- Improved visibility of available institutional data resources.
- Strengthened collaboration and trust around governance and stewardship.
- Created a clearer pathway from data to action and decision support.
- Elevated data literacy and the institutional mindset of available and usable data.

Lessons Learned

1. Accreditation = strategic catalyst
2. Decision-making comes first
3. Governance enables progress.
4. Trust matters as much as tech.
5. Foundations before dashboards.
6. Continuous improvement is key.
