ASN Student Learning Outcome Acquisition

UVU Department of Nursing Faculty strive to help students in the Associate in Science in Nursing (ASN) program meet the following Student Learning Outcomes (SLOs):

- • Implement skills to meet the individual needs of patients in structured health care settings.
- • Use established evidence-based nursing protocols in providing nursing care for patients.
- • Utilize sound judgment and critical reflection to prioritize nursing care for small groups in structured health care settings.
- • Assist in collection of research data within a structured format.
- • Demonstrate professional attributes including the ability to collaborate with the health care team, commitment to high ethical standards, and continuing professional development.
- • Apply standards of quality and safety in clinical practice.
- • Evaluate the effectiveness of nursing care and teaching plans in promoting safety for patients.
- • Integrate and evaluate personal responsibility and accountability in all nursing experiences.

Six months to one year after graduation, students are asked to evaluate the following on a 1 to 10 scale:

- • The ASN program assisted me in developing entry-level skills as a competent and caring nurse.
- • The ASN program provided me sufficient entry-level knowledge for my practice.
- • The ASN program assisted me in acquiring safe entry-level clinical judgment for my practice.
- • The ASN program assisted me in acquiring ethical and professional qualities for nursing practice.

Students' Perception of Readiness for Practice
