

Record with Kaltura Capture in Canvas

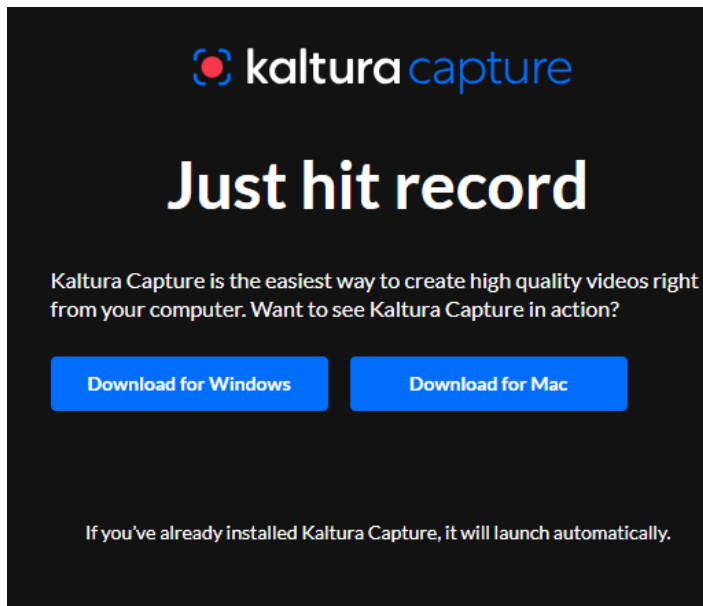

Capture is a desktop recording tool that can record your screen, camera, and audio. The settings are optimized for the best quality by default, so you can start recording right away. Here are the steps to record a video using Kaltura Capture.

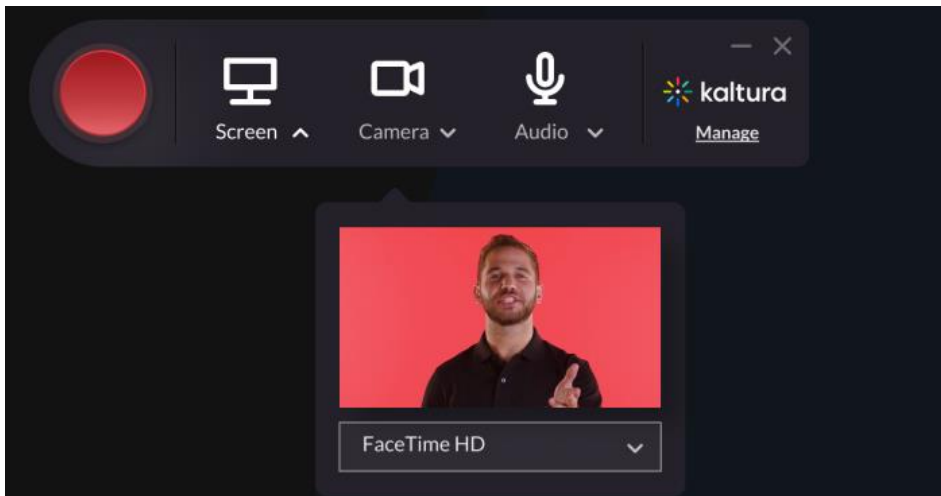

Step 1. You will want to select the “My Media” tab on the main Canvas navigation bar.

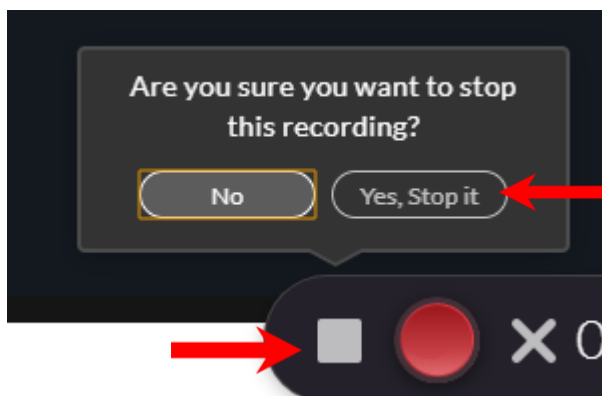

Step 2. In the My Media space, you will want to select the “Create” button and find “Capture” in the dropdown menu.

Step 3. You will be prompted to download Kaltura for either Windows or Mac. Please follow these download steps according to your device type.

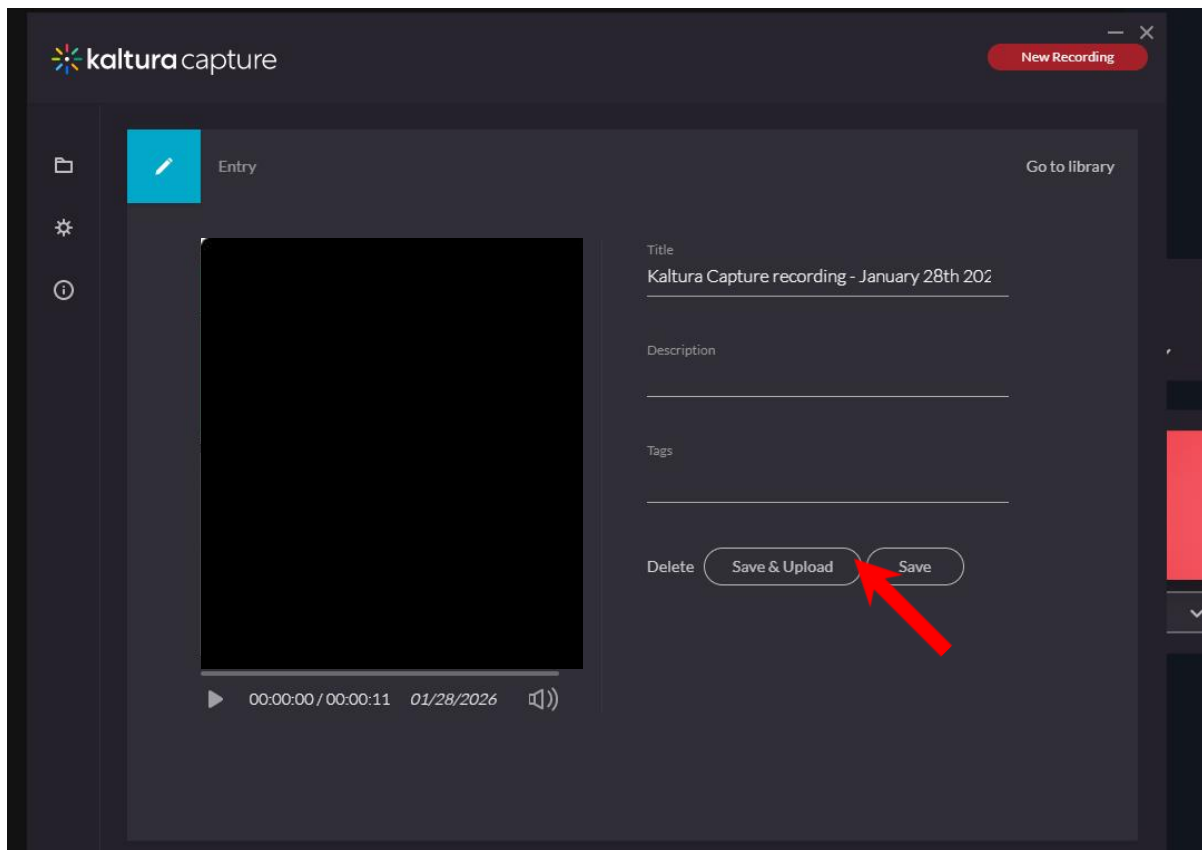

Step 4. Once you have downloaded Kaltura, you will be able to begin recording in the My Media space under the "create" tab. The recording tool bar will appear on your screen like this. You will press the red button to begin recording.

Step 5. When you are finished recording the video, press the square button to end the recording, then "yes, stop it".

Step 6. You will then be prompted to add the video to your My Media space on Canvas. Please select the “Save & Upload” button.

Step 7. Navigate back to the My Media space, and you will see the recording saved.

My Media

My Media interface showing a list of media items. The top bar includes a search bar, filters, and a 'Watch List' button. The main area displays a video item titled 'Kaltura Capture recording - January 28th 2026, 1:22:50 pm' with a thumbnail image. The item is marked as 'Private' and has a 'captions' button. Below the item, there is a message: 'There are no more media items.'
