

Nepal, Can It Be Sustained?

Nicholas Robinson
POLS3630
Abdrisaev Baktybek

Introduction

Nepal, a country swept in cultural wealth and diverse terrain, is home to the world's most majestic and difficult landscapes. With its vast stretches of mountains, Nepal is uniquely shadowed by its highlands. Still, this gorgeous geography brings upon unique challenges, specifically in the world of environmental sustainability and economic development. Mountain degradation, continually fueled by deforestation, change in climate, and the apparent pressures of tourism, has become a massive issue for Nepal's economy and the general welfare of its many mountain communities. Nepal's mountainous people, their economy, and the environment teeters on this fragile ecosystem, all fingers point to sustainable mountain development being eternally essential for both Nepal's ecosystem health and political/economic strength.

Methodology

Nepal's mountains are being increasingly threatened by the consequences of deforestation, tourism, and climate change. Without some sort of sustainable development effort, from outside sources and from within, that addresses these unique mountainous regions, the socio-economic and political state of Nepal's landscape will face the catastrophically growing challenges that it is starting to see. This paper uses a number of ways of citing, drawing from a large pool of primary sources to dig deep into Nepal's Sustainable mountain development. Some of such sources include this semester's text book by the late Jack D. Ives, many of Nepal's official news outlets, and official statements from Nepal's Prime minister himself. This paper uses these variety of points and pieces from all over the world to stitch together findings of deforestation, abhorrent tourism, preservation, adaptation, and agricultural needs.

Conclusion

Nepal's mountainous regions are at a critical juncture, where the balance between environmental sustainability and economic growth hangs in delicate equilibrium. As deforestation, tourism pressures, and climate change continue to escalate, the need for comprehensive sustainable development strategies becomes increasingly urgent. Preserving Nepal's natural heritage requires coordinated efforts involving government policies, local communities, and international partners. The economy, mountain dwellers, and landscapes are interconnected, drawn together beautifully by culture, food and song. With tourism and agriculture driving both their growth and degradation a microscopically thin line is drawn, and to walk this line seems almost impossible. In the absence of sustainable development efforts that balance economic needs with preservation, many of the regions of Nepal are at high risk of irreversible harm. Addressing these challenges and embracing sustainable mountain development requires urgent international collaboration, policy support, and a new found focus on climate adaptation to preserve the beauty and let Nepal remain a source of life and livelihood for generations to come.
